

PASSWORD SECURITY

STAY SAFE ONLINE

**TIP
01**

DON'T REUSE PASSWORDS

Use a different password for each account to prevent hackers getting access to all your accounts.

**TIP
02**

AVOID SEQUENTIAL NUMBERS

Don't use passwords with sequential numbers, such as password1 and password2.

**TIP
03**

USE LONG PASSPHRASES

Use long easy to remember passphrases instead of short, hard-to-remember passwords. Aim for 14 or more characters.

**TIP
04**

ONLY CHANGE WHEN NECESSARY

Change passwords only when there's a potential threat or you suspect unauthorised access to your account.

**TIP
05**

AVOID PERSONAL INFORMATION

Don't use easily guessable personal info like name, birthday, address, or family member's names as your password.

**TIP
06**

USE MULTI-FACTOR AUTHENTICATION

Use MFA with an authentication app whenever possible. Avoid using SMS for MFA.

**TIP
07**

STORE PASSWORDS IN A VAULT

Use a secure password manager to store all your passwords securely in one place.

**TIP
08**

PROTECT FROM PRYING EYES

Keep passwords private, don't write them down or save them in a file, and don't enter them when someone is watching.

**TIP
09**

KEEP IT SECRET, KEEP IT SAFE

Don't share passwords with anyone. Create separate logins if needed.

**TIP
10**

CHANGE IMMEDIATELY IF UNSURE

Change your password immediately if you suspect an account has been compromised or someone else knows it.
