

# Fun with Vulnerabilities

A Technical Guide to  
Improving Your Security  
Posture

# Fun with Vulnerabilities

**Our hands-on, interactive course helps developers play the role of a threat actor, teaching how to exploit and defend against real-world vulnerabilities.**

# Demystifying Security

**At Morrisec, we believe in empowering people. Instead of just handing you the solution, we'll teach your team the practical skills needed to secure your applications. Our goal is to demystify security and show that it's not as complex as it seems.**

# Hands-On Learning

**Security training doesn't have to be boring! Our course is designed to be interactive. Developers won't just listen to lectures—they'll learn by doing. Exploiting vulnerabilities firsthand creates a deeper understanding of how to write secure code.**

# **Empowering Your Team**

**You don't always need a dedicated security team to defend against threats.**

**With the right training, your developers can become your organisation's strongest defence. We'll help you harness your in-house skills to create a more secure environment.**

# The Developer's Toolkit

**We go beyond theoretical knowledge. Our course covers practical tools like threat modelling, OWASP resources, and vulnerability identification. Developers learn not just to identify risks but to mitigate them effectively within their own code.**

# Integrating Security Into Development

**Security isn't a one-time task. We show how to seamlessly integrate security practices into your development lifecycle. From threat modelling to vulnerability mitigation, we make security a natural part of your team's workflow.**

# Continuous Learning

**Security is a journey, not a destination. Our course builds foundational skills that last a lifetime. By combining theory with practical, real-world application, developers leave equipped to protect your business from evolving threats.**

**Join Us!**

**Don't miss out! Enrol your team and take the first step towards building a secure development environment.**
